Points to remember when writing your business justification:

Provide a clear and extensive reason why the software is required and why the pre-installed standard software in your assigned computer do not suffice.

Provide a brief description of your project initiatives, along with a summary of your business unit's need and technical requirements when applicable.

Provide the specific integrations to other systems when applicable.

Business Justification

Business Justification: HR Job Offer Tool Application Registration

The HR Job Offer Tool requires application registration, Microsoft Graph API consent, and access configuration to support HR's job offer workflow. The requested access will enable organizational sign-in, retrieval of candidate response data from SharePoint, and review of job offer correspondence received by the designated service accounts.

These capabilities will help reduce manual data retrieval and email checking, improve visibility into candidate responses, and support timely follow-up throughout the job offer process.

Justification for Requested Permissions

Permission Business justification

User.Read Supports single sign-on by allowing the application to retrieve the signed-in user's basic profile and identify the user within the HR Job Offer Tool.

Files.Read.All Enables downloading of the Candidate Responses Excel file from SharePoint so HR can use submitted candidate information in the job offer workflow.

Mail.Read Enables reading of emails and replies in the designated service-account mailboxes, including subjects, recipients, CC, and message content, to support tracking and review of job offer correspondence.

Service Accounts

- HRODJobOffer1@unilab.com.ph
- HRODJobOffer2@unilab.com.ph

The business requirement is limited to the relevant SharePoint candidate response file and the two service-account mailboxes. Access should be configured to the minimum scope necessary, with the permission type and available resource restrictions validated during technical review.

Application and Environment Configuration

The application uses web authentication with the following redirect URIs:

- Production: <https://hrjoboffer.unilab.com.ph/signin-oidc>
- Quality assurance: <https://qas-hrjoboffer.unilab.com.ph/signin-oidc>
- Local development: <https://localhost:5062/signin-oidc>

Approval Requested

Approval is requested for the application registration, required consent, and access configuration to enable these functions. Because the application handles candidate information and email content, access should be restricted to authorized personnel and managed in accordance with organizational security and data privacy requirements.
